

The **Center for Undergraduate Research Experiences (CURE)** provides university-wide leadership, coordination and support to student-faculty research collaborations, faculty grant-funded research projects and programs, and opportunities for service learning. Dyson College established CURE as part of its continuing commitment to innovatively enhance undergraduate teaching and learning.

Recognizing that sustained and intensive faculty mentoring cultivates strong academic achievement and retention, CURE strives to strengthen existing student-faculty research and creative inquiry through a range of initiatives. These include fostering opportunities for new partnerships through the **Dyson College Summer Research Programs**, the **Provost's Student-Faculty Undergraduate Research Programs**, the **Undergraduate Research Assistantships Program**, and collaboration with the **Dyson College Society of Fellows**.

CURE offers advisement for both internal and external research and houses educational grant programs, including Jumpstart which offers work-study funded service-learning opportunities for Pace University students.
