

The **Center for Undergraduate Research Experiences (CURE)** in Pace University's Dyson College of Arts and Sciences provides leadership, coordination and support to student-faculty research collaborations, faculty grant-funded research projects and programs, and opportunities for service learning. CURE is part of Dyson College's innovative efforts to enhance the quality of the undergraduate experience.

Undergraduate research in Dyson College encourages students partnering with faculty in a variety of creative and scholarly endeavors that may include publications, presentations at symposia, poster sessions, performances and website development. Recognizing that sustained and intensive faculty mentoring cultivates strong undergraduate achievement and retention, CURE works to strengthen existing student-faculty research and fosters opportunities for new partnerships through the **Society of Fellows of Dyson College** and the **Dyson College Summer Research Programs**.

CURE offers advisement for both internal and external research-funding and oversees grant clearance for Dyson College faculty. Additionally, CURE houses grant programs including Jumpstart, which offers work-study funded service-learning opportunities for Pace University students and the federal TRIO Student Support Services Program which provides academic support and enrichment for first-generation college students who also may be Pell-eligible, and/or disabled. Veterans also are encouraged to apply.
